The MICRO BR offers four simultaneous playback tracks plus 32 VTracks, MP3 compatibility, onboard multieffects, builtin rhythm patterns, a tuner, USB, an SD Card slot, and more. No guitar case or gig bag should be without one! But even though it's tiny, the MICRO BR packs an entire studio's worth of features into its tiny case. There are a dozen buttons on its front panel, nine knobs, and even a builtin microphone for quick capture. The rhythms don't consume any of the four playback tracks — they play back independently. 2 A quality multieffects processor is onboard, including a timestretch algorithm for changing the tempo of your audio tracks without changing pitch — a great tool for both audio editing and phrase training. The Time Stretch feature can also be used with MP3 data; the MICRO BRs Center Cancel feature can be applied to MP3 data as well. Load up your favorite guitar hero song via USB, slow down the tempo with no pitch change, and learn all of your favorite licks. You can even use the MICRO BR as a standard MP3 player. All of your data is stored on convenient SD Secure Digital media found in common electronics shops. The included 128MB card, for example, can record approximately 65 minutes of audio when one mono track is selected. Times may be slightly shorter depending on the number of songs that were created. rating. I had to use it to believe that a good power supply will get rid of all unwanted noise in the signal chain, compared to a cheaper one. I actually have 4 of them, gathered throughout the years, all still working flawlessly, and use all four plugged in a power strip under my Pedalboard Classic JR giving me a total of 2000mA and they power 89 pedals mostly analog but also a couple of digital ones without any problems. No ground loops, no unwanted noise, no need for a professional power supply such a cioks yet. Works really well and the build quality is top notch. I Have used them both live and in studio. One minor complaint is that the cable is really really long which is useful when youre trying to reach a socket thats far away but for me that I use them with a power strip under my pedals it can get a bit cluttered under my pedalboard when I have the four of them together. Send report Total quality A really reliable power supply YossMarr, 11.03.

2020 I originally bought this for my Dunlop Crybaby Classic GCB95F, because I wanted to invest a little more in the power supply in safetys sake. Though it didnt fit through the hole for the power supply on the pedal, Ive found another use for it and am happy to have bought it, because it looks and feels like a reliable and durable piece of technique and theres nothing cheap about it, dont you worry its worth it. It has a safety measure in an extra housing so that if something went wrong the pedalpedalboard would be safe. Whatsmore it has a fancy blue light that shows whether electricity flows through it. In conclusion, its a really nice power supply worth the investment.
