The endpoint has three soft keys, 24 programmable buttons, seven fixed function buttons, volume up and down buttons, an LCD, and a standard dial pad. Page 10 Introduction 1.1 Positioning the EP300 You should adjust the position of the EP300 on your desk or table to suit your individual needs and maximize the performance of the sound activated features. When using your EP300 as a speakerphone, the microphone and loudspeaker are farther from you than when you use a handset. Page 11 CONVERSip EP300 User To adjust the pedestal, perform the following tasks. 1. Grasp the rear of the pedestal base firmly with one hand and lift the rear portion of the EP300 upward with your other hand. 2. Lift the EP300 upward with one hand and raise the EP300 supporting arms upward with your other hand. Notice there are three sets of notches under the EP300 corresponding to the three positions available. 3. Page 12 Introduction 1.2 Making the Connections The connectors for attaching your EP300 to the network are located on the underside of the instrument. Here you will also find connectors for attaching the power supply and an optional headset. You can also connect a cable from the EP300 to your PC so that both devices can operate with a single network cable. The following diagram shows the cable connection locations. Page 13 CONVERSip EP300 User 1.3 Adjusting the Volume Adjusting the volume on the EP30024 instrument affects the loudness of the speaker, handset, and headset if equipped. Refer to Figure 11 for the location of the volume control. To adjust the volume during a call, perform the following steps. 1. Press the volume up or volume down button on the EP300. The EP300 adjusts the volume incrementally each tome you

press the button. 2. The volume setting remains in affect for the current call only. Page 14 Introduction To enter the configuration menu, press the MENU soft key. 1 HW Settings ENTER BACK NEXT Press MENU to advance to the next menu choice. <http://www.newdesert.pl/userfiles/carbine-auto-alarm-manual.xml>

To select an item, press the ENTER soft key. To return to the previous level, press the BACK soft key. To advance to the next item on the current menu, press NEXT. If the displayed results extend beyond the viewing area of the LCD, the soft key functions change to allow you to scroll to the left or right. Page 15 CONVERSip EP300 User The following selections are available from the EP300 menu. Main Menu Option 1 HW Settings sets the default volume level for the handset, speaker, headset, and ringer. 1 Handset Volume allows you to set the current volume setting for the handset, from 1 to 8, with 8 being the highest. The default is level 3. 2 Speaker Volume allows you to set the current volume setting for the speaker, from 1 to 8, with 8 being the highest. The default is level 3. Page 19 CONVERSip EP300 User 2. MAKING CALLS Comdial's EP300 is based on a technology called Session Initiation Protocol SIP. This technology provides new ways to process calls not previously available with standard telephone systems. 2.1 Making a Call to Another Extension You can make a call to another extension by dialing the number assigned to that extension, or by selecting the name of the intended party from your local address book or contact list. You can cancel the call before it is answered by pressing the CLEAR soft key. 5. The system rings the called extension if idle, or plays a busy signal if busy. Note that the system changes the soft key options on your EP300's LCD once the call connects. 95545000 HOLD TRANS END 6. Page 22 Making Calls 2.3 Redialing a Previously Dialed Number The system remembers the last ten numbers you dialed. If you want to redial any of those numbers, press the REDIAL button on the EP300. By pressing the PREV or NEXT soft keys, you can scroll through the list of previously called numbers, and select the number from the list. To redial a previously dialed number, perform the following steps. 1. Lift the handset, or press the SPEAKER button. The system plays the dial tone. 2. Press the Redial button. 3. Page 23 CONVERSip EP300 User 95545000 HOLD TRANS END 7. When the call is complete, press the END soft key, hang up the handset, or press the SPEAKER button if using the speakerphone option. 2.4 Making a Call Using a Speed Dial Button To use a speed dial button to make a call, perform the following steps. 1. Lift the handset, or press the SPEAKER button. The system plays the dial tone. 2. Press a preprogrammed speed dial button. 3. The system rings the called extension if idle, or plays a busy signal if busy.

You will hear a ringing tone from the speaker and the LCD display will provide you with the Caller

ID information about the call. To answer a call, perform the following steps. 1. An incoming call rings at your station. 9415545000 ANS DENY 2. Pick up the handset, or Press the ANS soft key for handsfree communications. This setting affects the transmitter of the handset, headset, and the builtin microphone of the EP300. This condition remains in affect until the call is disconnected, or you press the button again, whichever occurs first. To mute the microphone, press the MUTE button. Page 28 Processing Calls 4.3 Retrieving a Held Call Calls on hold can be retrieved by any endpoint that has a line appearance for the held call. 1. Press the SPEAKER button or pick up the handset if privacy is desired. 2. Press the flashing HOLD button. 3. The system returns the call to your endpoint and the extinguishes the HOLD lamp. If multiple calls are on hold at your station, the system does not extinguish the hold lamp until you have retrieved all held calls. 4. Page 29 CONVERSip EP300 User If you transfer the call without first announcing it, you have made an unscreened or blind transfer. The system automatically places the outside party on hold. 2. Enter the number for the intended destination and press the Dial button on your EP300. 3. Press the TRANS soft key to transfer the call. The program can extract several data fields Ext, CO, Call time, Call duration s, Call duration, Ring, Phone, Cost, Direction. These call records contain important information about each call, including whether it was an incoming call, and outgoing call, or another type, such as an internal extension to extension call. Many of these phone systems are KSU, but at some point associated costs might better be spent on upgrading to a If you need a Comdial replacement telephone to determine the correct model of There has never Supplement User Guide1 Comdial DigiTech Attendant.

Vertical Communications. Comdial's FXII 480port digital communications system packs over 200 features and functions into a compact package that solves a myriad of business communication challenges such as branch office networking. It uses existing FX station and line cards and also accepts Comdial's upcoming IP Networking and IP Telephone. Traditionally, enterprise networking has been pursued by only the largest corporations. With FXII, you can network small branch office sites 30 to 45 users with larger main office sites through digital or IP networking in a cost effective manner. With the expandable FXII, fiber optic expansion capability offers effective site coverage for campus environments such as business parks or university campuses. The new system combines telephony, computer and Internet technologies and uses the open standard SIP Session Initiation Protocol. CONVERSip's embedded SIP registrar and proxy enable realtime collaborative communications, unified messaging, video conferencing, presence management and more. The SIP registrar acts as a Presence Manager to display the presence status of other subscribers in the system similar to having a Busy Lamp Field on a telephone, but with additional information such as text messages such as "out to lunch". Comdial also introduces the CONVERSip EP300 Voice SIP desktop phone with 24 programmable buttons and EP200 Multimedia IP Endpoint for a Microsoft Windows XP PC. The CONVERSip MP5000 Media Platform handles 40400 users or up to 560 users per 5cabinet site and networking of up to 14 sites.

<http://itechsystem.fr/images/bunn-g9-grinder-manual.pdf>

MP5000 is based on Comdial's FXII platform introduced in 2001 and will function as both a circuitswitched and a packetswitched system, supporting existing Comdial trunk and station interfaces and the FXII feature set in addition to next generation technology. Comdial customers need not replace all of their current telephone investment, but can preserve existing equipment as they migrate to the new technology. FXII customers can easily migrate by simply replacing the

existing CPU card with the new "SIP Server Blade." Now your employees can tell the availability of the other party before they call and the best form of communications to use, reaching the intended party the first time, all done from your PC. The EP200 makes use of a "Contact List" usually associated with Instant Messaging. View the status of the individual and click to start a call. And with hotdesking, shift workers can log into the MP5000 from any desk. Once logged in, the system recognizes the user, establishes their unique personal settings such as voice mail and call forwarding settings, and provides instant secure access to your IP communications network. This technology allows you to share and conserve valuable office space without sacrificing individual communication expectations. Start Saving Today! To find out more about how USA Phone can increase productivity and save your company money, follow the link below and start saving today.
